

PACKAGE LEAFLET: INFORMATION FOR THE USER

Duraphat® 5000 ppm Fluoride Toothpaste (sodium fluoride)

Your medicine is available using the name Duraphat 5000 ppm Fluoride Toothpaste but it will be referred to as Duraphat Toothpaste throughout this leaflet.

Read all of this leaflet carefully before you start using this medicine.

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your dentist or pharmacist.
- This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their symptoms are the same as yours.
- If any of the side effects gets serious, or if you notice any side effects not listed in this leaflet, please tell your dentist or pharmacist.

In this leaflet:

- What Duraphat Toothpaste is and what it is used for
- Before you use Duraphat Toothpaste
- How to use Duraphat Toothpaste
- Possible side effects
- How to store Duraphat Toothpaste
- Further information

1. What Duraphat Toothpaste is and what it is used for

Duraphat Toothpaste is used to help prevent dental caries (tooth decay) in adolescents aged 16 years and over and adults, particularly amongst patients at risk from multiple caries.

This toothpaste contains fluoride as sodium salt, which belongs to a group of medicines called caries preventing agents.

2. Before you use Duraphat Toothpaste

Do not use Duraphat Toothpaste

- if you are allergic (hypersensitive) to sodium fluoride or any of the other ingredients of Duraphat Toothpaste.

Take special care with Duraphat Toothpaste

- Duraphat Toothpaste has a high fluoride content. Fluoride tablets, drops, chewing gum, gels or varnishes, as well as fluoridated water or salt, should be avoided during the use of Duraphat Toothpaste. In order to prevent accumulation of fluoride, your total intake must be assessed before using this fluoride toothpaste. Ask your dentist or pharmacist concerning this matter.

- Duraphat Toothpaste is not intended for use in adolescents and children under 16 years of age.

Using other medicines

No interactions with other medicines are known. Please tell your dentist or pharmacist if you are taking or have recently taken any other medicines, including medicines obtained without a prescription.

Using Duraphat Toothpaste with food and drink

Fluoridated water and salt should be avoided during the use of this toothpaste.

Food and drink, if taken immediately after brushing, may have an inhibitory effect on the remineralisation of the teeth. Therefore brush your teeth with Duraphat Toothpaste after meals.

Pregnancy and breast-feeding

There is no experience from the use of Duraphat Toothpaste in pregnant women. If you are pregnant or breast-feeding, ask your doctor, dentist or pharmacist before using this toothpaste as for any medicine.

Important information about some of the ingredients of Duraphat Toothpaste

This toothpaste contains sodium benzoate. Sodium benzoate is a mild irritant to the skin, eyes and mucous membrane.

3. How to use Duraphat Toothpaste

Duraphat Toothpaste is for use by persons aged 16 years and above.

Always use Duraphat Toothpaste exactly as your dentist or pharmacist has told you.

You should check with your dentist or pharmacist if you are not sure. Use Duraphat Toothpaste 3 times a day for brushing your teeth

- apply a 2cm ribbon onto your toothbrush for each brushing (2cm provides between 3mg and 5mg of fluoride).
- brush your teeth after each meal.
- vertically, from the gum to the tip of the tooth. - spit out excess foam and do not swallow

Careful brushing takes approximately 3 minutes.

If you use more Duraphat Toothpaste than you should, or if you have swallowed the toothpaste

If you swallowed a large amount of toothpaste by mistake, and if you experience digestive problems such as: vomiting, diarrhoea, and abdominal pain, you must tell a doctor immediately as treatment may be required. Please take this leaflet with you.

Duraphat Toothpaste contains menthol which if accidentally ingested at excessive amounts may cause convulsions, particularly in infants and children. If you constantly swallow too much of the toothpaste over several months and years, you may experience dental fluorosis (stained or speckled appearance of the dental enamel and enamel fragility) or bone fluorosis (osteosclerosis; increased density of your bones).

If you forget to use Duraphat Toothpaste

Simply use as soon as you remember, but do not use a double dose to make up for the missed dose. Continue treatment as usual after the next meal.

If you have any further questions on the use of this product, ask your dentist or pharmacist.

4. Possible side effects

Like all medicines, Duraphat Toothpaste can cause side effects, although not everybody gets them.

In some rare cases (i.e. less than 1 in 1000 people treated) allergic (hypersensitivity) reactions can occur e.g. rash, itching swelling and redness.

Burning oral sensation has also been reported.

Reporting of side effects

If you get any side effects, talk to your doctor, pharmacist or dentist. This includes any possible side effects not listed in this leaflet.

You can also report side effects directly via the Yellow Card Scheme at: www.mhra.gov.uk/yellowcard.

By reporting side effects, you can help provide more information on the safety of this medicine.

5. How to store Duraphat Toothpaste

Keep out of the sight and reach of children.

Do not use Duraphat Toothpaste after the expiry date (Exp) which is stated on the tube and the carton. The expiry date refers to the last day of that month.

Do not store above 25°C.

If your doctor decides to stop the treatment, return any leftover medicine to the pharmacist. Only keep it if your doctor tells you to.

If your medicine appears to be discoloured or show any other signs of deterioration, please return to your pharmacist who will advise you further.

Medicines should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.

6. Further information
